

Fraud Detection Capabilities

Detect fraud with superior dark web intel

Leverage HackNotice's real-time threat monitoring and search capabilities into potent online fraud detection.

Other OFD platforms don't offer watchlists or proactive alerting, which means you're not going to be able to act until it's too late. With HackNotice, the intel is instant.

Stop playing catch-up with fraud events and start being aware of them when you need to - before anything happens.

Real-time search results

- With HackNotice, you get real-time exposed record results for any search term. Plus, HackNotice lets you "word pool" search for a combination of any criteria, building user personas of risk. Search for any string, or multiple strings at once.

Easy integration

- Like the entire HackNotice platform, our OFD functionality can be quickly integrated into any existing security infrastructure, and is fully customizable (and automatable) through our API.

For every OFD need

- Account takeover
- Registration & onboarding
- Account and credit card compromise
- Chargeback fraud
- Payment fraud
- And more!

"Online fraud is a major threat surface for us. HackNotice takes a lot of the stress away because now we're learning about issues ahead of time."

-Customer, Fortune 500 company
